                                                     The present sequence represents a multiple sclerosis (MS) associated retrovirus (MSRV) genomic fragment used in the method of the invention. The invention provides complete or partial genomic sequences of the MSRV-1 pol gene, gag gene and env gene, and polypeptides encoded by these genes. The invention also provides antibodies raised against the polypeptides. The genomic sequences, polypeptides and antibodies are also claimed useful for diagnosing infection by MS and rheumatoid arthritisassociated viruses, and also for prevention and treatment of infection with these viruses

                         This sequence represents clone 5M6 from a novel multiple sclerosis related virus type 1 (MSRV1). The sequence can be used in diagnostic, prophylactic or therapeutic compositions to inhibit expression of a multiple sclerosis related virus and/or virus associated with rheumatoid polyarthritis.                          The invention relates to an isolated or purified nucleic acid from a virus associated with multiple sclerosis and/or rheumatoid arthritis.

C wiltiple sclerosis-associated virus (MSRV)-1. The nucleic acids comprise poly, gag or reverse transcriptase genes (or their fragments) encoding the proteins or reverse transcriptase genes (or their fragments) encoding the proteins or defined peptides (including immunodominant peptides).

CC derecting a virus associated with multiple sclerosis or rheumatoid arthritis, a prime for the amplification by polymerisation of a nucleic acid of a viral material associated with multiple sclerosis or rheumatoid arthritis, a polymeptide exhibiting an inhibitory activity from MSRV, and an antibody directed against the MSRV-1 virus obtained by correcting a human or animal body or calls with an immunogenic agent consisting of the antiganic polypeptide defined above. The nucleic acids are useful for detecting a biological sample a virus associated with multiple sclerosis or rheumatoid arthritis. The present cassociated with multiple sclerosis or rheumatoid arthritis. The present cassociated with multiple sclerosis or rheumatoid arthritis. The present sequence is a claimed MSRV-associated sequences as cacurately determined. Note: The SEQ ID numbers for the sequences as claimed many more them acid ont match the SEQ ID numbers in the main body of the patent do not match the SEQ ID numbers in the main hold or an antiboned in the main body of the patent do not match the SEQ ID numbers in the main hold or an antiboned in the main hold or an antiboned in the main hold or an antiboned in the main hold or an antiboned in the main hold or an antiboned in the main hold or an antiboned in the main hold or an antiboned in the main hold or an antiboned in the main hold or an antiboned in the main hold or an antiboned in the main hold or an antiboned in the main hold or an antiboned in the main hold or an antiboned in the main hold or an antiboned in the main hold or an antiboned will be antiboned be an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      540

The present invention describes a method (MI) for screening for an antineoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 847 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in activity and can be used to anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Horrigan S;

                                                                                                                                  1140
                                                                                                                                                                                      The present invention describes isolated polynucleotide sequences (I), which encode polypeptides (II) with biological activity. Also described: (II) a vector comprising (I); (2) an expression vector comprising (I); (3) a special genetically engineered to comprise (I) which is operatively associated with a regulatory sequence that modulates expression of (I) in the host cell; (4) a polypeptide (II) encoded by (I); (5) a composition comprising the polypeptide of (4) and a carrier; (6) an antibody directed against the polypeptide of (4) and a carrier; (5) a composition of (4) in a sample; (8) identifying a compound that binds to the polypeptide of (4) in a sample; (8) identifying a compound that binds to the polypeptide of (4); (7) detecting (I) or the polypeptide of (4); (9) producing the polypeptide of (4); and (10) a collection of polynucleotides comprising at least one of the polynucleotide sequences (I). The polynucleotides (I) can be used as hybridisation probes, oligomers or primers, for chromosome or gene mapping, for the recombinant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to new nucleic acid sequences of human endogenouse retrovirus, HERV-7q, which is located on chromosome 7q. Sequiacory elements associated with HERV-7q may alter expression of other genes (even remote genes) on the same chromosome, inducing immunological and/or neurological changes (which may be pathological or protective/curative). HERV-7q peptides can be used to improve efficiency of the immunotherapy. HERV-7q peptides and their coding sequences can be used in immunogenic or vaccinating compositions, for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 nucleic acid sequences of human endogenous retrovirus, HERV-7g, used diagnosis, treatment and prevention of autoimmune and neurological

(I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed sequence tags for identifying expressed activity of (II) or to treat disease states involving (II). (II) is activity of (II) or to treat disease states involving (II). (II) is polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                  10204 rccaradgeccaagaaccccagercagaacacacagecreecaccaccarcerreegag 10260

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   620
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                680
involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at Itp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CACAGGGGGAAGGACAAGGATTGGGATATAAACTCAGGCATTCAAGCCAGCAACAGCA-A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (ix) as a biochip; (x) for diagnosing carcinoma; (vii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent

that affect the activity of the DITHBs, by expressing inactive genome, crapplementaring the patient's own production of them. (I) and (II) may be used to treat diseases, for example, cell proliferative disorder.

Crohn's disease, acquired immune deficiency syndrome (AIDS), lymphoma, leukacemia, autoimmune disorders, and respiratory disorders. Additionally, (I) may be used to produce the DITHPs, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) and its complementary sequences may also be used as DNA probes in disgnostic sangles, and therefore which patients may be in need of restorative camples, and therefore which patients may be in need of restorative camples, and therefore which patients may be in the production of antibodies against DITHPs and in assays to identify modulators of DITHP expression and activity. The anti-DITHP antibodies and antagonists may also be used as antisposit and activity. The anti-DITHP antibodies and antagonists may be used to down regulate expression and activity. The anti-DITHP copression and activity. The anti-DITHP antibodies and antagonists may also be used as diagnostic agents for detecting the presence of DITHPP is samples (e.g. by enzyme linked immunosorbant assay the profile.). Assalloge-Assalloge represent human diagnostic and therapeutic contemps.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Archaccacadaccccredaccedecrecraccardcacceargriaardararcaan 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to polynucleotides (I) encoding diagnostic and therapeutic (DITHP) polypeptides (II), which include e.g. enzymes, and proteins involved in growth and development and receptors. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate DITHP expression. For example, (I) and (I may be used to treat disorders associated with decreased polypeptide
                                                                                                             Human; receptor; diagnostic; therapeutic; gene therapy; vaccine; cell proliferative disorder; Crohn's disease; lymphoma; leukaemia; acquired immune deficiency syndrome; AIDS; autoimmune disorder;
                                                                diagnostic and therapeutic polynucleotide (DITHP) #17.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 1; Page 304; 522pp; English

                                                         The present sequence represents the nucleotide sequence corresponding to the 3' env region and long terminal repeat sequences from clone CL6 of Multiple Sclerosis retrovirus (MSRV-1). The specification describes a long terminal repeat (ITR)-RUS region which encodes the expression of a MSRV-1 protein. This is unusual for LTRs, in particular in the RUS region. The sequence includes CAAT and TATA signals which are present in the U3 and R regions and are not directed towards the CDS indicated in the features table. Probes and antibodies to the MSRV-1 retrovirus protein and encoding polymuclectide sequences are used to detect the presence of MSRV-1 retrovirus in a biological sample. (Updated on 06-AUG-2003 to correct OS field.)
to detect the presence of MSRV-1 retrovirus in a biological
                                                                                                                                                                                                                                                                                                                                                                                       1200 AGGAGAAGAACGCTGTTATTATGTTAATCAATCCAGAATTGTCACTGAGAAAGTTAAAGA

Further disclosed is an antibody that binds to the polypeptide of the invention. The activity of the polypeptide of the invention may be described as cytostatic. The antibody is useful for detecting the presence of (I) in a sample. Nucleic acid molecules of the invention are useful in the detection of breast tumours. (I) is useful as a marker for breast cancer and in breast cancer therapy. Sequences given in records ACN78851-ACN92934 represent nucleic acid markers associated with breast cancer. Note: The sequence listing does not form part of the specification but may be obtained in electronic format from the USPTO web site at seqdata.uspto.gov/sequence.html?DocID=20030099974

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to human embryogenesis associated proteins (EMBRY) and nucleic acid molecules encoding such proteins. EMBRY sequences are useful for screening modulators useful for treating or preventing disorders associated with abnormal expression of EMBRY. The disorders treated include reproductive disorders such as infertility, endometriosis, endometrial or ovarian tumour; autoimmune/inflammatory disorders uch as equired immune deficiency syndrome (AIDS), allergies, contact dermattiis; disorders of the placenta such as preeclampsia, abruptio placentae etc. Sequences of the invention are also useful for analysing a proteome of a tissue or a cell type. EMBRY proteins are useful as immunogens for preparing antibodies. Polynucleotides of the invention are useful for creating knockin humanised animals or transgenic animals to model human diseases. They are also used in gene therapy. The

The invention relates to novel human diagnostic and therapeutic conjugated dithp (ACC46080-ACC46749) and to their encoded polymucleotides designated dithp (ACC46080-ACC46749) and to their encoded proteins (DITHP; ABR41186-ABR41812). The invention also relates to polymucleotide sequences at least 90% identical to the dithp cDNA sequences of the invention; recombinant whost cells and transgenic organisms comprising a dithp nucleic acid sequence; the transgenic organisms comprising a dithp nucleic acid sequence; the crecombinant production of DITHP proteins; antibodies specific for DITHP proteins antibodies specific for DITHP proteins and protein sequences; methods of detecting dithp nucleotide and protein sequences; methods of some seasons the toxicity of test compounds using a dithp hybridisation of probe. Dithp nucleic acid sequences and DITHP proteins may be used in the assessing the toxicity of test compounds using a dithp hybridisation continuation of a wide variety of conditions including cancer and other cell continuates in the amplituding cancer is mad other cell continuations including cancer and other cell continuations in flammatory disorders; ransport disorders; neurological disorders; pastrointestinal disorders; ransport contess; and connective tissue disorders. They may also be used to disorders; neurological disorders. They may also be used to cell type and connective tissue disorders. They may also be used to cell type and to induce antibodies. They may also be used to continually useful in somatic or germline gene therapy of the disorders additionally useful in somatic or germline gene therapy of the disorders and primers, in genotyping and identification of individuals, in toxicological testing, and in transcript imaging. The present sequence represents a dithp cONA and an invention of the protein and the protein and madels of the protein accorders and accorders and accorders and accorders and accorders and accorders and accorders and accorders and accorders and accorders and accorders and accor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes novel human secreted proteins encoded by polynucleotides isolated from human adult testes, adult brain, adult blood or adult placenta, or murine adult bone marrow or thymus cDNA libraries. The products of the invention are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, haematopoiesis regulating activity, tissue growth activity, activity, activity, insue growth activity, haematopoiesis regulating activity, tissue growth activity, haemostatic activity, receptor/ligand activity, and themour and thromodylvic activity, receptor/ligand activity, and tumour invasion suppressor activity, and tumour inhibition activity. The polynucleotides are also stated to be useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

                                                                                                                                                                                                                                                                                                          This is the human secreted protein AU172 2 nucleotide sequence, obtained from a human adult testes cDNA library. The invention relates to secreted human and murine proteins. The polymucleotides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals. Detecrion of the levels of the proteins can be used for the diagnosis of e.g. pre-eclampsia, placental pathology or cancer. Agents which modulate the expression or function of the proteins may be used for treating a neoplastic disease and inhibiting metastasis. Other suggested activities include nutritional activity (e.g. in feeds), cytokine and cativities include nutritional activity (e.g. in feeds), cytokine and cativity and suppressing activity, haemcostaic activity, themcostaic activity, chemcitic activity, haemcostaic and thrombolytic activity, chemcitic/chemckinetic activity, haemcostaic and thrombolytic activity, creeptor/ligand activity, and tumour inhibition activity. The invasion suppressor activity, and tumour inhibition activity. The propries are also stated to be useful for gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2246
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2306

                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a protein comprising fully defined A2302 1

C protein or BD127 16 protein. The polynucleotides are useful for
expressing recombinant proteins for analysis and are also useful as
chromosome markers or tags to identify chromosomes or to map related
continue. The proteins are useful as amino acid supplement, carbon
positions. The proteins are useful as amino acid supplement, carbon
c continued immunodeficiency (SCID); autoimmuno disorders (e.g. severe
c combined immunodeficiency (SCID); autoimmune disorders (e.g. multiple
c continued immunodeficiency (SCID); autoimmune disorders (e.g. multiple
c continued is systemic lupus erythematosus, rheumacid arthritis), allergic
reactions (e.g. asthma), myeloid or lymphoid cell deficiencies,
c sclerosis, systemic lupus erythematosus, rheumacid arthritis), allergic
c cagulation disorders, inflammatory diseases (e.g. systemic inflammatory
c peripheral neuropathy. Alzheimer's diseases (e.g. systemic inflammatory
c response syndrome (SIRS), ischaemia-repertusion injury, Crohn's disease),
c anaphylaxis and hypersensitivity. Proteins are also useful for inducing
t tumour immunity, for inducing bone, cartilage, tendon, ligament and/or
c nerve growth or regeneration, for proliferating neural cells and for
c regenerating nerve and brain tissue, for inducing fertility and for
c inhibiting tumour growth. Proteins are also useful as chemokine for
mammalian cells (e.g., monocytes, fibroblasts, neutrophils), and also
c useful as inhibitors of receptor/ligand interactions. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2126

The present sequence encodes a human endogenous retrovirus envelope protein. The specification describes a method for detecting expression of an envelope protein from a human endogenous retrovirus (HERV), in cells, of a tissue or culture. The method comprises detecting syncytia formation due to the fusogenic properties of the envelope protein. Envelope polypoptides and polynucleotides are used to produce therapeutic or prophylactic compositions, particularly for treatment of cancer, to correct defects in placental development (or other natural formation of other types of syncytia), and to promote adhesion of cells in grafts or cellular repair processes. Expression of sequences antisense to the polynucleotide are used to prevent formation of syncytia

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                               09
                                                                                                             The invention relates to identifying compounds which are modulators of syncytin expression. The syncytin modulators are useful in diagnosis and treatment of preeclampala and gestational trophoblast disorders (e.g. choriocarcinoma, hydatiform mole, placental site tumour and missed/incomplete abortion). Syncytin is a human gene derived from the envelope gene of human endogenous defective retrovirus, HRRV-W. The present invention is based partly on the discovery that syncytin expression is dramatically reduced in preeclampaia, and is also mis-localised to the apical syncytiotrophoblast membrane. The present sequence is human
         developing preeclampsia, comprises determining whether the expression or activity of syncytin in the cell is modulated in the presence of a test

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromesome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed consists of (II) as useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a cupplement. (II) and its binding partners are useful in medical imaging cupplypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful in medical imaging consolution polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences of the invention. Note: The sequence data for this coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format, incoming acid. 1415 GCTACTCCTCTTTGGACCCTGTATCTTTAACCTCCTTGTTAACTTTGTCTTTCCAGAAT 1474 1294 1354 ccrcasccaarssarsccrissarrcrcccrrrrassaccrcrascascraraararr 1414 16; 123 180 240 300 120 TGAAGCTGTAAAAGCTACAAATAGTTCTTCAAATGGAACCCCAGATGCAGTCCATGACTAA 360 9 1175 TCAAAATCGAAGAGCTTTAGACCTTCTAACCGCTGAAAGAGGGGGAACCTGTTTATTTT AGGGGAAGAATGCTGTTAGTATGTTAATCAATCTGGAATCATTACTGAAAGTTAAAGA 1235 AGGGGAAGAATGCTGTTATTATGTTAATCAATCCGGAATCGTCACTGAGAAAGTTAAAGA AATTTGAGATCGAATATAATGTAGAGCAGAGGACCTTCAAAACACTGCACCCTGGGGGCCT CCTCAGCCAATGGATGCCCTGGACTCTCCCCTTTAGGACCTCTAGCAGCTATAATATT TITACTCCTCTTTGGACCCTGTATCTTCAACTTCCTTGTTAAGTTTGTCTTCCAGAAT Gaps TCAAAATCGAAGAGCTTTAGACTTGCTAACCGCCAAAAGAGGGGGAACCTGTTTATTT New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity. 74; Sequence 6394 BP; 1840 A; 1597 C; 1384 G; 1571 T; 0 U; 2 Other; Length 6394; Indels Score 728.6; DB 5; Pred. This sequence represents the complete sequence of the human endogenous retrovirus (HERV) W genome. The nucleic acids, their fragments or peptides encoded by them are markers of autoimmune disease (e.g. multiple sclerosis, rheumatoid polyarthritis, disseminated lupus erythematosus, insulin- dependent diabetes and related pathologies) and of abnormal or susceptibility to these conditions, or proximity markers for associated with this susceptibility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TITACTCCTCTTTGGACCCTGTATCTTCAACTTCCTTGTTAAGTTTGTCTTCCAGAAT 300

                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents an endogenetic retrovirus, which is associated with an autoimmune disease, and is integrated into the human genome. The retrovirus is human endogenous retrovirus W (HERV-W). The HERV-W retrovirus is associated with autoimmune disease, failure of pregnancy or disorders of pregnancy. HERV-W nucleic acid fragments, or proteins derived from it, are useful for diagnosis of autoimmune disease (specifically multiple sclerosis) and for monitoring pregnancy. The nucleic acid fragments may also be used for in situ labelling of isolated chromosomes, while the transcription product can be used to study or monitor I cell proliferation in vitro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TGAAGCTGTAAAGCTACAAATAGTTCTTCAAATGGAACCCCAGATGCAGTCCATGACTAA 360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents an endogenetic retroviral nucleic acid fragment, which is associated with an autoimmune disease, and is integrated into the human genome. The fragment is originally derived from a movel retrovirus, human endogenous retrovirus (HENV-W). The HENV-W retrovirus is associated with autoimmune disease, failure of pregnancy or disorders of pregnancy. The nucleic acid fragment, or proteins derived from it, are useful for disgnosis of autoimmune disease (specifically multiple sclerosis) and for monitoring pregnancy. The nucleic acid fragments may also be used for in situ labelling of isolated chromosomes, while the transcription product can be used to study or monitor I cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AATCATCTATTGCCTGAGAGCACAGCGGGAAGGACAAGGATTGGGATATAAACTCAGGCA 780
New nucleic acid sequences from human endogenous retrovirus-W - expressed exclusively in placenta and useful in diagnosis and therapy of autoimmune disease, and abnormal or failed pregnancy.
                                                              This sequence represents clone cl.PH74 of the human endogenous retrovirus (HERV) W genome. The nucleic acids, their fragments or peptides encoded by them are markers of autoimmune disease (e.g. multiple sclerosis, rheumatoid polyarthritis, disseminated lupus erythematosus, insulinteumatoid dispetes and related pathologies) and of abnormal or unsuccessful pregnancy and can be used as chromosomal markers for susceptibility to these conditions, or proximity markers of genes
                                                                                                                                                                                                                               9

The present sequence represents an endogenetic retroviral nucleic acid fragment, which is associated with an autoimmune disease, and is integrated into the human genome. The fragment is originally derived from a novel retrovirus, human endogenous retrovirus W (HERV-W). The HERV-W retrovirus is associated with autoimmune disease, failure of pregnancy or disorders of pregnancy. The nucleic acid fragment, or proteins derived from it, are useful for diagnosis of autoimmune disease (specifically multiple sclerosis) and for monitoring pregnancy. The nucleic acid fragments may also be used for in situ labelling of isolated chromosomes, while the transcription product can be used to study or monitor T cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1961
